BUILDERS' HARDWARE

Catalog No. 20

LOCKWOOD HARDWARE MFG. CO.
FITCHBURG, MASS.

NEW YORK

CHICAGO

PHILADELPHIA

BOSTON

BALTIMORE

Announcement

The "Lockwood" line of locks and builders' hardware is completely described and illustrated in this catalog. There are numerous new items listed in this volume, which have been added to the line from time to time, and we believe the trade will find our presentation of products in this catalog adequate and comprehensive.

TERMS: Two per cent net discount allowed on payments made within ten days of date of invoice, and net cash within thirty days, f. o. b. Fitchburg, Mass.

ORDERS: Orders may be declined, in whole or part, if the price or quantity ordered does not meet with our approval. Shipments of orders will be made in whole or part, contingent upon our stock on hand. Any unfilled balance will be shipped as promptly as possible.

SHIPMENTS: Shipments are f. o. b. factory at Fitchburg, with no freight allowance. The consignee assumes all risk after delivery of goods to the transportation company. Delays in delivery, due to transportation or to manufacturing conditions beyond our control, obviate our responsibility.

SIZES: The measurements in our catalog are naturally subject to slight discrepancies, due to possible variations in grinding and finishing. Goods will be made to template, when so ordered, for use on hollow metal doors where accurate measurements are essential for mortising. Blue prints must be furnished for template work, showing the dimensions.

RETURNED GOODS: All of our products are manufactured with care and subject to a rigid inspection system. Before shipment, goods are carefully checked with the orders so as to minimize errors. After shipment, the purchaser becomes the possessor of the goods.

Defective merchandise or errors in filling orders, for which we are responsible, will be promptly rectified after the receipt of the goods. We definitely cannot accept returned goods, however, unless their return has been authorized by us.

CONTRACT HARDWARE: Products of any description, left over on contracts, will not be accepted for return or credit. We will assume no responsibility for goods so returned and without our permission.

LOCKWOOD HARDWARE MFG. COMPANY.

Spring, Double Compression	89		

Numerical Index

Design numbers, with symbols for the various designs, are not listed in this index. We have, however, listed the base numbers without the design symbols and have indicated the group of catalog pages on which the various classifications of product are listed. To determine the exact page on which any design item is located, it is necessary to refer to the Design Index on pages IV a and IV b.

Service

We endeavor to make all shipments to our customers promptly. It is mutually advantageous to do so and co-operation from our customers in the form of complete information with each order will enable us to give them the service to which they are entitled.

Set numbers in all wrought designs and also in the more popular cast designs simplify ordering. When other combinations are required, detail must be given of the lock and trim.

Customers should not establish their own set numbers in making up combinations not covered by our set numbers. Such a procedure creates confusion and delay and necessitates superfluous correspondence.

Contract orders, in particular, require full and complete details, due to the special conditions which invariably obtain. It is always advisable to give the following information:

- Thickness of doors
- Hand of doors
- Keying instructions
- Name, owner and location of building
- Finishes
- Type of strike required for cremone bolts and casement fasteners
- Beveled front locks
- Rabbeted front locks
- Special backsets
- Sizes of escutcheons, push plates, butts, etc.
- Length of casement adjusters, bolts, transom chain, etc.
- Special conditions should be thoroughly detailed

Orders which have entered the factory should not be changed except for the most urgent reasons. Manufacturing processes commence almost immediately and considerable expense and delay is involved when belated instructions for changes are sent to us.

Lockwood Standard Finishes

Below are listed Lockwood Standard Finishes, designated by symbols and the comparative symbols established by the U. S. Bureau of Standards. The U. S. Finish symbols are shown for comparison only and should not be used when ordering. Group numbers in last column indicate the column in Price List in which price of the item may be found.

Unlacquered

If any goods are wanted unlacquered, affix "NL" to finish symbol, thus—34NL, etc.

Oil Rubbed Finishes

Dull Bronze and Statuary Bronze finishes can be furnished oil rubbed to order. When so wanted, affix "OR" to symbol, thus—34OR, etc. Price group 2.

Waxed Finishes

Dull Bronze or Statuary Bronze finishes can be furnished waxed to order. When so wanted, affix "W" to symbol, thus—34W, etc. Price group 3.

Mounted Samples

"Will Help Make the Sale"

We illustrate below the standard styles of sample mounts which our experience has shown to be the most suitable for ordinary use.

These boards and blocks are regularly furnished in Mahogany finish. They can also be supplied to order in the following finishes: Walnut, Light Oak, Dark Oak and White Enamel.

The display boards are made of laminated wood to prevent warping.

Coupon Booth Lock Sets

With Indicator

Set No. MF 2711

For Doors to Coupon Booths in Banks and Trust Companies

Case: $3\frac{1}{2} \times 3\frac{1}{2} \times \frac{3}{4}$ in., Cast Iron, Japanned
 Front: $5\frac{5}{8} \times 1\frac{5}{16}$ in., Cast Bronze
 Hand: Not Reversible. Specify Hand
 Backset: $2\frac{3}{4}$ in.
 Spacing: 2 in.
 Strike: $1\frac{5}{16}$ in. Lip to Center
 Hub: Bronze, $\frac{5}{16}$ in.
 Bolt: Cast Bronze
 Cylinder: Cast Bronze. Changes Unlimited
 Keys: 3, Nickel Silver, Class 308
 Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key.

Operation

Latch bolt by key from outside and knob from inside at all times. Outside knob is always rigid.

The attendant sets the indicator in the outside escutcheon, by means of the thumb slide, to show a white disc when the booth is ready for use. The white disc is still exposed when the booth is occupied and the door is closed, but when the inside knob is turned to open the door a red disc is displayed. A door closer closes the door, which is then automatically locked, and the red disc serves as a signal to the attendant that the booth is vacant. The booth is then inspected and prepared for the next client.

Nos. 8700, L 8700, T 8700, 8701, L 8701, 8702, L 8702, T 8702, LT 8702, 8703, L 8703.

Cylinder Outside, Turn Knob Inside

Nos. 8700 $\frac{1}{2}$, L 8700 $\frac{1}{2}$, T 8700 $\frac{1}{2}$, 8701 $\frac{1}{2}$, L 8701 $\frac{1}{2}$, 8702 $\frac{1}{2}$, L 8702 $\frac{1}{2}$, T 8702 $\frac{1}{2}$, LT 8702 $\frac{1}{2}$, 8703 $\frac{1}{2}$, L 8703 $\frac{1}{2}$.

Cylinder Outside Only

Nos. 8702V, L 8702V, T 8702V.

Residence Door Entrance Handle Lock Set

The above illustration shows Lock No. T 8702 $\frac{3}{4}$ applied to door, with Sectional Type Door Handle for Outside, and Knob and Rose with Turn Knob for Inside.

Escutcheon with Turn Knob attached can be furnished in place of Rose and separate Turn Knob if desired.

Any of the handles illustrated on the following pages may be used for the outside of door.

The following locks can be used with the above trim:

Cylinder Outside, Turn Knob Inside

Nos. 8702 $\frac{3}{4}$, L 8702 $\frac{3}{4}$, T 8702 $\frac{3}{4}$, LT 8702 $\frac{3}{4}$, 8703 $\frac{3}{4}$, L 8703 $\frac{3}{4}$.

General Lock Information

Anti-friction Latch

An additional latch which engages the strike and retracts the regular latch. It minimizes friction between latch and strike.

Auxiliary Latch

A supplementary latch which deadlocks the latch bolt, and prevents latch bolt from being forced back or stop work released by the insertion of an instrument between door and jamb. The auxiliary or supplementary latch does not enter the strike.

Easy Spring Latch Bolt

A latch construction in which two springs are used, one acting on the latch bolt and both on the knob hub. This permits easy closing of door.

Gun Spring

A heavy flat spring with which higher grade narrow backset locks are equipped. The gun spring prevents sagging of lever handles used with these locks.

Beveled Fronts

The better locks can be furnished with fronts beveled to conform with beveled edge of door. Beveled locks are not reversible. The regular bevel of lock fronts is $\frac{1}{8}$ in 2 inches. Other bevels are special and can be furnished at an extra charge.

Rabbeted Fronts

The backsets of rabbeted locks as listed in catalog indicate both short and long side measurements. When order specifies one backset only it will be assumed that the measurement applies to the short side. Rabbeted locks are not reversible. The regular rabbet is $\frac{1}{2}$ inch. Other depths of rabbet can be furnished at an extra charge.

Rounded Fronts

Mortise dead locks can be furnished with rounded fronts when required. The standard radius is $2\frac{1}{4}$ inches.

Armored Fronts

An additional front attached to the regular front of lock by machine screws. The armored front protects cylinder set screws.

Recessed Fronts

A specially constructed front and strike which prevents latch bolt from being forced back when door is closed. Furnished only on locks so listed in catalog.

Dimensions

When more than one dimension is listed the first mentioned is the vertical dimension. The second measurement is the horizontal dimension.

Backset

The backset of a lock is the distance from front of lock to center of hub or keyhole.

Spacing

The spacing of a lock is the distance between the center of knob hub and center of keyhole.

Master-Key Systems

Ordinary Master-Key System

Each lock is operated by its regular change key, which will not operate any other lock in the system. All locks in the system can be operated by a key known as the master-key.

Grand Master-Key System

Two or more groups of master-keyed locks, all of which are operated by key known as the grand master-key. The locks in each master-key group are operated by its respective master-key, which will not operate locks in any other group.

Grand Master-Key System for Hotels with Emergency Key

Each lock is operated by its regular change key as in ordinary master-key and grand master-key systems, and in addition all locks are controlled by a key known as the emergency key, which will operate locks under all conditions. Emergency key feature can be furnished only with the locks so described in catalog.

Master-Key Records

A careful record is kept of all master-key and grand master-key systems, thus enabling us to supply additional locks for an established master-key system. Duplicate master-keys or grand master-keys are furnished only to the properly authorized persons.

Master-Keyed Bit Key Locks

Locks with same class master-key can be master-keyed together in sets

Standardized Template Locks For Hollow Metal Doors

The locks listed below are designated as Lockwood Standardized Locks, conforming to the standards adopted by the hollow metal door manufacturers.

These locks have a standard front $8 \times 1\frac{1}{4}$ inch, a maximum thickness of $\frac{7}{32}$ inch, furnished with $\frac{1}{2}$ -inch No. 12 x 24 machine screws. The strike has a standard dimension of $5\frac{3}{4} \times 1\frac{1}{4}$ inch and the lip of the strike has a standard height dimension of $3\frac{1}{2}$ inches. The strike is of a flat type, without box; the box being furnished by the hollow door manufacturer. The distance between the cylinder hole and knob hole varies in different type cylinder locks and no standard has been adopted for this difference.

Hand and Bevel of Doors

All locks listed in this catalog as "reversible" may be used on either right or left hand doors, except where the edge of the door is beveled. For such doors both the hand and the size of bevel must be specified. It is advisable, in all instances, to specify the hand of a lock, in conformity with the illustrations on the following page.

How to Determine the Hand of a Door

The hand of a door is determined from the outside, except on French Doors and Casements on which cremone bolts or casement fasteners are used. On French Doors and Casements, when so equipped, the hand is taken from the inside.

The outside of an Entrance door is the street side.

The outside of a Room door is the hall side.

The outside of a Communicating door is the side from which the butts or hinges are not visible when the door is closed.

The outside of a Closet door is the room side.

The outside of Twin doors is the side between the two doors.

The inside of a French door is the side on which the cremone bolt is applied.

Standing on the outside of a door, if the butts are on the right it is a right hand door; if on the left, it is a left hand door. If, when standing outside, the door opens from you, or inward, it takes a lock with regular bevel latch bolt; if it opens toward you, or outward, it takes a lock with reverse bevel latch bolt.

Bevel of Doors

A door is beveled when the edge of the door is not at a right angle with the surface. Mortise locks for such doors require fronts beveled to correspond with the bevel of the door. The bevel can be determined by placing a square on the door. State the thickness of the door and the distance which one edge drops back from the other.

The standard bevel is $\frac{1}{8}$ inch in 2 inches.

Double doors having rabbeted faces require mortise locks with fronts to correspond. The standard rabbet is $\frac{1}{2}$ inch, and the faces of rabbeted doors should conform to established lock standards.

Mortise locks, both regular and reverse bevel, take the same strike. Reverse bevel rim locks require a different style strike than regular bevel rim locks. See illustrations below.

Lock Construction

The illustrations on this page show the various types of Spring and Latch Construction used in Lockwood Mortise Locks.

The type of construction used is indicated by letter in the detailed description of the locks.

Bit Key Locks for use with Knobs

Type A

Single Compression Spring

Type B

Extension Easy Spring

Type C

Double Compression Spring

Bit Key Lock for use with Knobs

Type D

Double Compression Spring

Bit Key Lock for use with Lever Handles

Type E

Gun Spring

Cylinder Mortise Locks For Entrance Doors

No. 5000

- Case:** Cast Iron, Japanned. See below
Front: Cast Bronze. See below
Hand: Reversible
Backset: Regular, see below. Special for No. 5000, 1½, 1¾, 2, 2¾, 3, 3¼, 3½, 4, 4¼, 5 in. Width of Case is 1¼ in. more than backset
Spacing: Knob to Turn Knob, 2¼ in.
Knob to Cylinder, 3¾ in.
Strike: 15/16 in. Lip to center
Hubs: Knob Hub, Bronze, Swivel, 3/8 in.
Turn Knob Hub, Bronze, 3/16 x 1/16 in.
Bolts: Cast Bronze
Cylinder: Cast Bronze. Changes Unlimited
Keys: 3, Nickel Silver, Class 308
Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by knob from either side. Both bolts by key from outside at all times. Dead bolt by turn knob from inside. Outside knob is locked by stop in face

Easy Spring Latch Bolt

No. 5040 $\frac{3}{4}$ 

Case: 5 $\frac{1}{2}$ x 4 x 1 $\frac{3}{16}$ in., Cast Iron, Japanned
Front: 8 x 1 $\frac{1}{4}$ in.
Hand: Reversible
Backset: 2 $\frac{3}{4}$ in.
Spacing: Knob to Turn Knob, 2 $\frac{1}{4}$ in.
 Knob to Cylinder, 3 $\frac{3}{4}$ in.
Strike: 1 $\frac{5}{16}$ in. Lip to center
Hubs: Knob Hub, Bronze, Swivel, $\frac{3}{8}$ in.
 Turn Knob Hub, Bronze, $\frac{3}{16}$ x 1 $\frac{1}{16}$ in.
Bolts: Cast Bronze
Cylinder: Cast Bronze
Keys: 3, Nickel Silver, Class 308
Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by knob from either side and by key from outside. Outside knob is locked by stop in face or by turn knob inside. Turn knob on inside also locks against key and deadlocks latch bolt

Auxiliary latch automatically locks latch bolt, so that it cannot be forced back when door is locked, but not preventing key or knobs from operating latch bolt

Easy Spring Latch Bolt

Cylinder Mortise Locks

For Vestibule and Office Doors

No. 5000³/₄

Case: 5¹/₂ x 4 x 1³/₁₆ in., Cast Iron, Japanned
 Front: 8 x 1¹/₄ in.
 Hand: Not Reversible. Specify Hand
 Backset: 2³/₄ in.
 Spacing: Knob to Turn Knob, 2¹/₄ in.
 Knob to Cylinder, 3³/₄ in.
 Strike: 1⁵/₁₆ in. Lip to center
 Hub: Bronze, Swivel, ³/₈ in.
 Bolts: Cast Bronze
 Cylinder: Cast Bronze
 Keys: 3, Nickel Silver, Class 308
 Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by knob from either side and by key from outside. Outside knob is locked by stop in face. When so locked, bolt can be operated by key only from outside and knob inside

Auxiliary latch automatically deadlocks latch bolt, so that it cannot be forced back when door is locked, but not preventing key or knobs from operating latch bolt

The auxiliary latch also locks the stop work so that it cannot be tampered with when door is closed

Cylinder Mortise Locks

For Entrance Doors to Apartment Houses, Schools and Public Buildings

Nos. 8793 to 8799

†Not Reversible
With Hinged Latch Bolt

Nos. 8793 to 8799

Case: $5\frac{1}{4} \times 3\frac{7}{8} \times 1$ in., Cast Iron, Japanned
Front: $7\frac{1}{2} \times 1\frac{3}{8}$ in.
Hand: Not Reversible. Specify Hand
Backset: $2\frac{3}{4}$ in.
Spacing: $4\frac{1}{4}$ in.
Strike: $1\frac{5}{16}$ in. Lip to center
Bolts: Cast Bronze
Cylinder: Cast Bronze. Changes Unlimited
Keys: 3, Nickel Silver, Class 308
Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

Operation

No. 8793. Latch bolt by bar or lever pad from inside at all times. From outside by thumb latch, except when deadlocked by key. When locked, entrance may be had by turning key, which unlocks the stop work and also retracts the latch bolt.

Auxiliary latch automatically deadlocks latch bolt, so that it cannot be forced back when door is locked.

No. 8794. Same as No. 8793, except that latch bolt can be held in retracted position by key when so desired.

No. 8798. Same as No. 8793, but with two cylinders. The inside cylinder locks and unlocks the thumb latch. The outside cylinder only retracts the latch.

No. 8799. Same as No. 8798, but outside cylinder will hold the latch bolt in a retracted position.

No.	Front	Cylinder	Changes

Cylinder Mortise Hotel Locks

For Corridor Doors

Nos. 5074 and 5075

Case:	7 $\frac{1}{4}$ x 4 x 1 $\frac{3}{16}$ in., Cast Iron, Japanned
Front:	8 $\frac{3}{4}$ x 1 $\frac{1}{4}$ in.
Hand:	Reversible
Backset:	2 $\frac{3}{4}$ in.
Spacing:	Knob to Turn Knob, 2 $\frac{3}{8}$ in. Knob to Cylinder, 5 $\frac{1}{2}$ in.
Strike:	1 $\frac{5}{16}$ in. Lip to center
Hubs:	Knob Hub, Bronze, $\frac{5}{16}$ in. Turn Knob Hub, Bronze, $\frac{3}{16}$ x 1 $\frac{1}{16}$ in.
Bolts:	Cast Bronze
Cylinder:	Cast Bronze
Keys:	3, Nickel Silver, Class 308
Master-keying	Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

With Electric Switch Strike

This lock can be used with an electric switch strike

When so used, locking the door from the outside extinguishes the lights in the room

Operation

No. 5074. Latch bolt operated from either side by knob. Upper dead bolt from corridor side by guest, master, grand-master, display and emergency keys and lower dead bolt from inside by turn knob

When locked from inside by turn knob, all keys but display and emergency keys are inoperative from outside. Locking of the door from inside locks the knob rigid and acts as an indicator for the maid. When locked from inside, guest key cannot be withdrawn

When locked from outside by display or emergency keys, it cannot be operated by guest, master or grand-master keys. Display key operates its own lock at all times. Emergency key operates all locks at all times

No. 5075. Same as No. 5074, but operated by key from inside instead of turn knob

Display key furnished only when so ordered

Nos. 5074 and 5075 furnished with button indicator when so ordered. See page 174

Mortise Hotel Locks For Corridor Doors

Nos. 5590 to T5591

Operation

Nos. 5590 and T5590

Latch bolt by knob from either side. Upper dead bolt by guest, master, grand master and emergency keys from corridor side. Lower dead bolt by guest key from inside. When locked from inside the guest key cannot be withdrawn and all keys but the emergency key are inoperative from outside.

Locking the door from inside by guest's key also locks the knob rigid and acts as an indicator for the maid. When locked from outside by emergency key all other keys are inoperative.

Nos. 5592 and T5592

Same as Nos. 5590 and T5590, except that the lower dead bolt is operated by turn knob from inside instead of key.

Case: Cast Iron, Japanned. See below
 Front: Cast Bronze. See below
 Hand: Not Reversible. Specify Hand
 Backset: 2 $\frac{3}{4}$ in.
 Spacing: Outside, 3 $\frac{3}{4}$ in. Inside, 2 $\frac{1}{8}$ in.
 Strike: 1 $\frac{5}{16}$ in. Lip to center
 Bolts: Cast Bronze. Latch Construction, Type D, page 89
 Hubs: Bronze, $\frac{5}{16}$ in.

Master-Keying

Can be master-keyed in one set of 6000, all different, or arranged in various groups, with a master-key for each group and a grand master-key to pass all.

Master-keyed with other master-keyed locks having same class master-key.

With Button Indicator

These locks can be furnished with button indicator showing room is occupied, when so desired. See page 174.

Operation

Nos. 5591 and T5591

Furnished with Display Key

Latch bolt by knob from either side. Upper dead bolt by guest, master, grand master and emergency keys from corridor side. Lower dead bolt by guest key from inside. When locked from inside the guest key cannot be withdrawn, and all keys but the emergency key are inoperative from outside.

Locking the door from inside by guest's key also locks the knob rigid and acts as an indicator for the maid. When locked from outside by display key it cannot be operated except by display key or emergency key. When locked from outside by emergency key all other keys are inoperative.

Nos. 5593 and T5593

Same as Nos. 5591 and T5591, except that the lower dead bolt is operated by turn knob from inside instead of key.

Mortise Hotel Locks

For Corridor Doors

No. 5586

Case: $5\frac{1}{2} \times 3\frac{7}{16} \times \frac{5}{8}$ in., Cast Iron, Japanned
 Front: $7\frac{1}{2} \times 1\frac{1}{16}$ in.
 Hand: Reversible
 Backset: $2\frac{3}{4}$ in.
 Spacing: $2\frac{1}{2}$ and 4 in.
 Strike: $1\frac{3}{16}$ in. Lip to center
 Bolts: Cast Bronze. Latch Construction, Type D, page 89
 Hub: Bronze, $\frac{5}{16}$ in.

Operation

Latch bolt by knob from either side at all times. Upper dead bolt by guest key inside. Lower dead bolt by guest, master and grand master-keys outside

Master-Keying

Can be master-keyed in one set of 6000, all different, with a master-key to pass, or arranged in various groups, with a master-key for each group and a grand master-key to pass all

Master-keyed with other master-keyed locks having same class master-key

Easy Spring Latch Bolt

No.	Front	Two Keys, Class	Tumblers	Changes	Master-Key
5586	Cast Bronze	169, Nickel Plated Steel	4	6000	Class 159

No. 5588

Case: $4\frac{5}{8} \times 3\frac{1}{2} \times 1\frac{1}{16}$ in., Cast Iron, Japanned
 Front: $6\frac{3}{8} \times 1$ in.
 Hand: Reversible
 Backset: $2\frac{3}{4}$ in.
 Spacing: $1\frac{3}{4}$ and $3\frac{1}{2}$ in.
 Strike: $1\frac{3}{16}$ in. Lip to center
 Bolts: Cast Bronze. Latch Construction, Type D, page 89
 Hubs: Knob Hub, Bronze, $\frac{5}{16}$ in.
 Turn Knob Hub, Bronze, $\frac{3}{16}$ in.

Operation

Latch bolt by knob from either side at all times. Dead bolt by turn knob from inside and by guest-master, grand master and emergency key from outside. When locked from inside by turn knob all keys are inoperative from the outside except emergency key. When locked by emergency key all other keys are inoperative. Can always be unlocked from inside

Master-Keying

Can be master-keyed in one set of 3000, all different, with a master-key to pass, or arranged in various groups, with a master-key for each group and a grand master-key to pass all

Master-keyed with other master-keyed locks having same class master-key

Easy Spring Latch Bolt

Mortise Knob Locks

For Class Room Doors

Nos. L5374³/₄ to L5376³/₄

Case: 5³/₁₆ x 4³/₄ x ³/₄ in., Cast Iron, Japanned
 Front: 6⁷/₈ x 1¹/₈ in.
 Hand: Not Reversible. Specify Hand
 Backset: 2³/₄ in.
 Spacing: 2³/₄ in.
 Strike: 1³/₁₆ in. Lip to center
 Bolts: Cast Bronze
 Hub: Bronze, Swivel, ⁵/₁₆ in.

Operation

Latch bolt by knob from inside at all times and by knob from outside only when auxiliary latch bolt is locked in a retracted position by key. When auxiliary latch is released by key the outside knob and latch bolt are both automatically deadlocked

Master-Keying

No. L5374³/₄. Can be master-keyed in one set of 320, all different, with a master-key to pass, or can be arranged in various groups, with a master-key for each group and a grand master-key to pass all. Master-keyed with other master-keyed locks having same class master-key

Nos. L5375³/₄ and L5376³/₄. Can be master-keyed in one set of 600, all different, with a master-key to pass, or can be arranged in various groups, with a master-key for each group and a grand master-key to pass all. Master-keyed with other master-keyed locks having same class master-key

Anti-Friction Latch Bolt

No.	Front	One Key, Class	Tumblers	Changes	Master-Key
L5374 ³ / ₄	Cast Bronze	153, Nickel Plated Steel	4	320	Class 161
L5375 ³ / ₄	" "	169, " " "	"	600	" 159
L5376 ³ / ₄	" "	137, " " "	"	"	" 199

Nos. 5385¹/₂ and 5386¹/₂

Case: 4¹/₄ x 4 x ⁵/₈ in., Cast Iron, Japanned
 Front: 6¹/₄ x 1¹/₁₆ in., Recessed
 Hand: Not Reversible. Specify Hand
 Backset: 2⁷/₈ in.
 Spacing: 2¹/₂ in.
 Strike: Protected Strike. Lip to center, 1³/₈ in.
 Bolt: Cast Bronze
 Hub: Bronze, Swivel, ⁵/₁₆ in.

Operation

Latch bolt by knob from inside at all times and by knob from outside except when knob is locked rigid by key from either side. By key from outside at all times

Recessed front prevents latch bolt from being forced back by any instrument inserted between face of lock and strike

Master-Keying

No. 5385¹/₂. Can be master-keyed in one set of 600, all different, with a master-key to pass, or can be arranged in various groups, with a master-key for each group, and a grand master-key to pass all. Master-keyed with other master-keyed locks having same class master-key

Easy Spring Latch Bolt

Mortise Night Latches

No. 1215

Case: $4\frac{5}{8} \times 4 \times 1\frac{3}{16}$ in., Cast Iron, Japanned
Front: $6\frac{1}{2} \times 1\frac{1}{8}$ in.
Hand: Reversible
Backset: Regular, $2\frac{3}{4}$ in. Special, 2 in. Width of Case is $1\frac{1}{4}$ in. more than backset
Spacing: $2\frac{7}{8}$ in.
Strike: $1\frac{5}{16}$ in. Lip to center
Hub: Bronze, $\frac{5}{16}$ in.
Bolt: Cast Bronze
Cylinder: Cast Bronze
Keys: 3, Nickel Silver, Class 308
Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by key from outside and turn knob inside. Can be held in retracted position by stop in face of latch

Easy Spring Latch Bolt

No.	Front	Cylinder	Changes	Turn Knob
1215	Cast Bronze	One, Cast Bronze	Unlimited	9815

No. 1215 $\frac{3}{4}$

Case: $4\frac{5}{8} \times 4 \times 1\frac{3}{16}$ in. Cast Iron, Japanned
Front: $6\frac{1}{2} \times 1\frac{1}{8}$ in.
Hand: Reversible
Backset: Regular, $2\frac{3}{4}$ in. Special, 2 in. Width of Case is $1\frac{1}{4}$ in. more than backset
Spacing: $2\frac{7}{8}$ in.
Strike: $1\frac{5}{16}$ in. Lip to center
Hub: Bronze, $\frac{5}{16}$ in.
Bolts: Cast Bronze
Cylinder: Cast Bronze
Keys: 3, Nickel Silver, Class 308
Master-keying: Can be master-keyed in sets as desired, with other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by key from outside and turn knob inside. Can be held in retracted position by stop in face of latch. Auxiliary latch automatically deadlocks latch bolt so that it cannot be forced back when door is locked, but not preventing key or knob from operating latch bolt

Easy Spring Latch Bolt

No.	Front	Cylinder	Changes	Turn Knob

 Backset: 1 $\frac{3}{8}$ in.
 Spacing: 1 in.
 Strike: $\frac{3}{4}$ in. Lip to center
 Hubs: Bronze, $\frac{5}{16}$ and $\frac{3}{16}$ in.

Operation

Latch bolt by knob outside and lever handle inside. Dead bolt by turn knob from inside

Easy Spring Latch Bolt

No.	Front	Bolts
1029	Wrought Bronze	Cast Bronze

Half dozen in a box, with screws.

Specify number and finish. Description of finishes, page V.

Mortise Latches

No. 1130

Case: $3\frac{1}{2} \times 2\frac{3}{16} \times \frac{1}{2}$ in., Cast Iron, Japanned
Front: $4\frac{7}{8} \times \frac{3}{4}$ in.
Hand: Reversible
Backset: $1\frac{5}{8}$ in.
Spacing: $2\frac{1}{8}$ in.
Strike: $\frac{7}{8}$ in. Lip to center
Hub: Bronze, $\frac{5}{16}$ in.
Bolt: Cast Bronze

Operation

Latch bolt by knob outside and lever handle inside. By key from outside at all times. Outside knob is locked by stop in face

Easy Spring Latch Bolt

No.	Front	Two Keys, Class	Tumblers	Changes
1130	Cast Bronze	439, Nickel Plated Steel	2	12

No. 1230

Case: $3\frac{1}{2} \times 2\frac{1}{4} \times \frac{9}{16}$ in., Cast Iron, Japanned
Front: $4\frac{7}{8} \times \frac{3}{4}$ in.
Hand: Reversible
Backset: $1\frac{5}{8}$ in.
Spacing: $2\frac{1}{8}$ in.
Strike: $\frac{7}{8}$ in. Lip to center
Hub: Bronze, $\frac{5}{16}$ in.
Bolt: Cast Bronze
Cylinder: Cast Bronze
Keys: 3, Nickel Silver, Class 308
Master-keying: Can be master-keyed in sets, as desired, with other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by knob outside and lever handle inside. By key from outside at all times. Outside knob is locked by stop in face

Easy Spring Latch Bolt

No.	Front	Cylinder	Changes
1230	Cast Bronze	One, Cast Bronze	Unlimited

Half dozen in a box, with screws.

Specify number and finish. Description of finishes, page V.

Mortise Locks and Latches

For Asylums and Hospitals

No. 1098

Case: $4\frac{5}{8} \times 3\frac{5}{8} \times \frac{3}{4}$ in., Cast Iron, Japanned
 Front: $6\frac{3}{4} \times 1\frac{1}{8}$ in.
 Hand: Reversible
 Backset: $2\frac{3}{4}$ in.
 Spacing: $2\frac{3}{16}$ in.
 Hub: Bronze, $\frac{5}{16}$ in.
 Bolt: Cast Bronze

Operation

Dead bolt by knob from either side. Key locks bolt from both sides, either in locked or unlocked position, so that it cannot be operated by knobs

Master-Keying

Can be master-keyed in one set of 600, all different, with a master-key to pass, or arranged in various groups, with a master-key for each group and a grand master-key to pass all

Master-keyed with other master-keyed locks having same class master-key

No.	Front	One Key, Class	Tumblers	Changes	Master-Key
1098	Cast Bronze	137, Nickel Plated Steel	4	600	Class 199

No. 1099

Case: $4\frac{5}{8} \times 3\frac{5}{8} \times \frac{3}{4}$ in., Cast Iron, Japanned
 Front: $6\frac{3}{4} \times 1\frac{1}{8}$ in.
 Hand: Reversible
 Backset: $2\frac{3}{4}$ in.
 Spacing: $2\frac{3}{16}$ in.
 Strike: $1\frac{3}{16}$ in. Lip to center
 Hub: Bronze, $\frac{5}{16}$ in.
 Bolt: Cast Bronze

Operation

Latch bolt by knob from either side. Key locks bolt from either side, so that it cannot be operated by knobs

No. 1097 has recessed front which prevents latch bolt from being forced back by any instrument inserted between face of lock and strike

Master-Keying

Can be master-keyed in one set of 600, all different, with a master-key to pass, or arranged in various groups, with a master-key for each group and a grand master-key to pass all

Master-keyed with other master-keyed locks having same class master-key

East Spring Latch Bolt

No.	Front	One Key, Class	Tumblers	Changes	Master-Key
1099	Cast Bronze	137, Nickel Plated Steel	4	600	Class 199
1097	Cast Bronze	137, Nickel Plated Steel With Recessed Front	4	600	Class 199

Three in a box, with screws.

Specify number and finish. Description of finishes, page V.

Mortise Latches

For Asylums and Hospitals

No. 1096

Case: $4\frac{3}{4} \times 4 \times \frac{3}{4}$ in., Cast Iron, Japanned
 Front: $7\frac{1}{8} \times 1\frac{3}{8}$ in.
 Hand: Reversible
 Backset: Regular, $2\frac{3}{4}$ in. Special, 3 in. Width of Case is $1\frac{1}{4}$ in. more than backset
 Spacing: 3 in.
 Strike: $1\frac{5}{16}$ in. Lip to center
 Bolt: Cast Bronze. Latch Construction, Type D, page 89
 Hub: Bronze, Rigid, $\frac{5}{16}$ in.

Operation

Latch bolt by key from either side. Hub holds knobs rigid. Door is always locked when closed

Master-Keying

Can be master-keyed in one set of 600, all different, or arranged in various groups, with master-key for each group and a grand master-key to pass all

Master-keyed with other master-keyed locks having same class master-key

Easy Spring Latch Bolt

No.	Front	One Key, Class	Tumblers	Changes	Master-Key
1096	Cast Bronze	137, Nickel Plated Steel	4	600	Class 199

No. 1096 $\frac{3}{4}$ 

Case: $4\frac{3}{4} \times 4 \times \frac{3}{4}$ in., Cast Iron, Japanned
 Front: $7\frac{1}{8} \times 1\frac{3}{8}$ in.
 Hand: Reversible
 Backset: Regular, $2\frac{3}{4}$ in. Special, 3 in. Width of Case is $1\frac{1}{4}$ in. more than backset
 Spacing: 3 in.
 Strike: $1\frac{5}{8}$ in. Lip to center
 Bolts: Cast Bronze. Latch Construction, Type D, page 89
 Hub: Bronze, Rigid, $\frac{5}{16}$ in.

Operation

Latch bolt by key from either side. Hub holds knobs rigid. Door is always locked, when closed

Auxiliary latch automatically locks latch bolt, so that it cannot be forced back when door is closed, but does not prevent key from operating latch bolt

Master-Keying

Can be master-keyed in one set of 600, all different, or arranged in various groups, with master-key to pass each group, and a grand master-key to pass all

Master-keyed with other master-keyed locks having same class master-key

Easy Spring Latch Bolt

Cylinder Rim Dead Locks

Strike for Nos. 6294 and 6295 Strike for Nos. 6292 and 6293

Nos. 6292 and 6294

Case: 3 x 4½ x 7⁄8 in.
 Hand: Reversible
 Backset: 2¾ in.
 Turn
 Knob: Bronze
 Strike: See below
 Bolts: Cast Bronze, with Hardened Steel Slide
 For Doors: 1¾ to 3 in. thick, either right or left hand. For single or double doors opening in and double sliding doors
 Cylinder: Cast Bronze. Five pin-tumblers
 Keys: 3, Nickel Silver, Class 308
 Master-keying: Can be master-keyed in sets as desired with other Lockwood Cylinder Locks having same class key

Operation

Nos. 6292 and 6294. By key from outside and turn knob inside

Nos. 6293 and 6295. By key from either side. Knob is omitted. The inside cylinder is built into the lock case

The Lockwood Jimmy-Proof Deadlock represents the ultimate in lock security. There is no sturdier or more secure locking device made and when applied to the door it actually locks the door and jamb together into an inseparable unit.

Construction

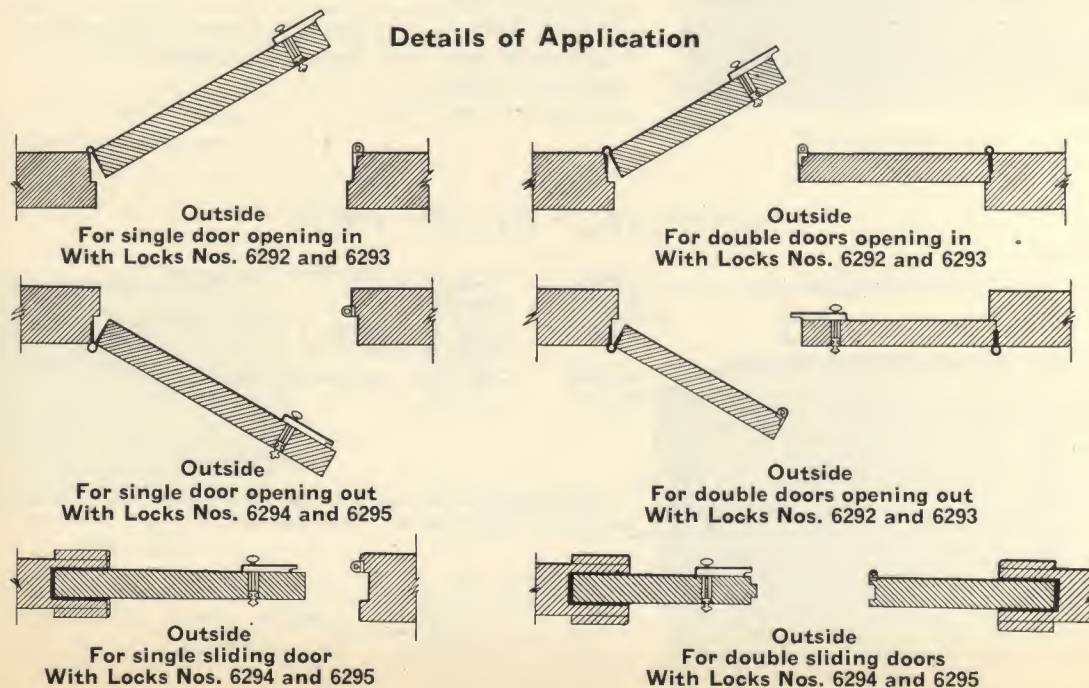

The case and strike are made of heavy cast bronze with polished raised surfaces and matted panel. An attractive appearance which will harmonize with other door trim.

The two heavy bronze bolts have a rotary motion and lock into the strike with a viselike grip. An auxiliary hardened steel sliding bolt concealed in the lock case gives added protection to the rotary bronze bolts and minimizes the possibility of sawing through the bolts.

The interior parts are simple and sturdy, so there is no liability of the lock getting out of order or failing to function properly.

No.	Case and Strike	Type of Strike	Cylinders	Changes

Cylinder Rim Night Latch

With Modernistic Case and Strike

Nos. 5925 and 5926

Here is a new Lockwood Modernistic Night Latch, distinctive in appearance and harmonizing with the builders' hardware trim used in the finest modern buildings. It combines beauty and security and will give a final note of distinction to the decorative motif of any structure, large or small. Its graceful, sweeping lines and the attractive finishes in which it can be furnished will appeal to those who appreciate decorative treatment in a night latch, something which has not been available in the past.

The case is sturdily constructed, of heavy cast metal, in either brass, bronze, or iron, and the Lockwood Pin-tumbler Cylinder gives it maximum locking security.

This ingeniously designed night latch offers quality protection for the modern house beautiful.

Case: 2 $\frac{3}{8}$ x 4 $\frac{1}{4}$ in. See below
Hand: Reversible, by reversing bolt and using flat strike packed with each latch
Backset: 2 $\frac{3}{8}$ in.; for doors 1 $\frac{1}{4}$ to 3 in. thick
Strikes: Rim, Cast
 Reverse Bevel, Wrought
Bolt: Cast Bronze
Turn
 Knob: Bronze, Oval
Cylinder: Cast Bronze. Five pin-tumblers
Master- Can be master-keyed in sets as desired, with
 keying: other Lockwood Cylinder Locks having same class key

Operation

Latch bolt by key from outside and turn knob inside. Slide stop can be set to hold latch bolt retracted and also to deadlock the latch so that it cannot be forced back when door is locked

Lockwood Cylinders

The Lockwood Pin-tumbler Cylinders here illustrated are used with Lockwood Mortise and Rim Locks illustrated and described in this catalog.

The Lockwood Pin-tumbler Cylinder is simple in construction, yet offers the highest degree of key security. Only the correct key, cut expressly for the particular combination in each individual lock, will operate it.

The cylinders are constructed of brass or bronze metals and consist of a case or shell, inclosing a revolving plug containing five pin-tumblers and springs. The insertion of the proper key lifts all of the pins to the dividing line, permitting the plug to rotate and thereby operating the cam attached to the inner end of the plug. The cam, engaging with the lock mechanism, operates the bolt work of the lock. The minutest inaccuracy in the setting of any pin-tumbler will prevent rotation of the plug.

The slightest variation in the length of the pin-tumblers serves to change the combination and this feature permits of unlimited key changes and the maximum security.

Master-Keyed Cylinders

Lockwood Cylinders can be master-keyed in one set, comprising any number of key changes, all different, with a master-key to pass or they may be arranged in any number of sets, each set having any number of changes, all changes different, with a master-key to pass the locks in each set and a grand master-key to pass all of the locks.

Hotels, colleges, factories and other institutional buildings frequently require special master-key systems, where it is desired to have each floor or section under the control of its own master-key while all floors or sections are under the control of one grand master-key, for use by an authorized person. All Lockwood Cylinder Locks can be arranged to suit any requirement. Correspondence is invited and our experience is at the service of anyone who has an intricate locking problem to solve.

Lockwood Key-Cutting Machine

This Key-Cutting Machine is designed and built to meet the needs of the practical locksmith. It is manufactured with the greatest care and precision and is guaranteed to perform accurately the type of work for which it is intended.

The Improved American

No. 175-1A

For Duplicating Flat Steel and Cylinder Keys

A sturdy and accurate machine, simple in design and operation.

Keys are accurately cut. The key guide or copying dog is very easily adjusted. Key clamps are built into the sliding carriage which moves to either side, forward and back. Overcutting of a key made impossible by the use of the sliding carriage. Keys accurately set in clamp with the aid of a simple spring gauge which is out of sight when the key is being cut.

Specially designed duplicating cutter makes possible cuts close to the shoulder of cylinder keys.

No screws, nuts, or bolts hidden from view and the very few used can be easily reached.

CUTTERS: No. 5RF—Rotary File Cylinder Key Duplicator.

No. 3FS—Carbon Steel Slotter—.055 in. thick.

Bench Space—7 x 11½ in.

Shipping Weight, complete with motor, 50 lbs.

NOTE: Motor not included unless ordered extra. Please specify voltage and current of motor when ordering.

Knob Attachments

Showing Types of Shanks and Methods of Mounting

S K Type

The outside knob is fastened to the spindle by a pin, covered by the thimble on the rose. The inside knob has a screwless shank and is adjusted by means of a spanner wrench. This type of knob affords the most accurate adjustment. Especially suitable for use in schools, public buildings, etc.

S T Type

The door knobs are attached to the spindle by screws, passing through the knob shanks and screwed into the spindle. The knobs are thus drawn tightly against the spindle. Washers under the knob shanks take up the end play. Regularly furnished with two-piece wrought steel knobs and a number of cast bronze knobs as listed in catalog.

S C Type

The outside knob is fastened to the spindle by a pin, covered by the thimble on the rose. The end of the spindle for the inside knob is threaded. The knob is screwed down to make a close fit and is held in place by set screw, entering the groove of the spindle. A movable ring, with a hole through which the set screw is adjusted, covers the shank of the inner knob and when set screw is in place, the movable ring is turned, covering the set screw and preventing the screw from working loose. There is a one-inch range of adjustment. Furnished, when specified, with cast bronze knobs and wrought bronze knobs with cast shanks that are listed in the catalog with GS type shanks.

P T Type

The outside knob is fastened to the spindle by a pin, covered by the thimble of the rose. The end of the spindle for the inside knob is threaded. The knob is screwed down to make a close fit and is held in place by a set screw, entering the groove of the spindle. The thimble of the rose has a hole through which the set screw is adjusted. When set screw is in place the rose is turned, covering it so that the screw will not work loose. The thimbles of both inside and outside roses cover the entire knob shanks. There is a one-inch range of adjustment.

P G Type

The outside knob is fastened to the spindle by a pin, covered by the thimble on the rose. The end of the spindle for the inside knob is threaded and the knob is screwed down to make a close fit. The inside knob is held in place by a set screw, entering the groove of the spindle. There is a one-inch range of adjustment. Furnished when specified with cast bronze knobs and wrought bronze knobs with cast shanks that are listed in the catalog with GS type shanks.

G S Type

The ends of the spindle are threaded and both outside and inside knobs are screwed down to the correct position to eliminate looseness and still retain easy operation. The knobs are held in place by a set screw, entering the groove of the spindle. The shanks fit snugly into the rose, eliminating side play. There is a one and one-half inch range of adjustment. Furnished regularly with glass knobs, one-piece metal knobs and cast bronze knobs except where otherwise noted in catalog.

P D Type

This type is particularly adaptable for lever handles. Both outside and inside lever handles are screwed on to the spindle. Both outside and inside lever handles are secured to the spindle by a combination dowel pin and set screw, which passes through the spindle. Thickness of door must be given when ordering.

*Measurement is from end of handle to center of spindle.

†Furnished with 3/8-inch spindles or with swivel spindles, when required.

‡For types of knob shanks, see page 181.

When lever handles are used with locks not having "gun spring" hub the auxiliary spring attachment, shown below, should be used and the order must so specify.

Auxiliary Springs

For Lever Handles

The case contains a coiled steel spring designed to prevent sagging of heavy lever handles, and also to relieve the latch spring in locks from heavy wear. Mortised into door between lock hub and rose or escutcheon.

Surface Flap, 7/8 in. Offset, Reversible

Cast Bronze

No. 8685, Polished

Size	Weight, Per Pair
5 x 5 in.	52 oz.

Surface Flap, 7/8 in. Offset, Reversible

All of the above butts are furnished regularly with wood screws. Butts made to template and packed with machine screws can be supplied to order. When so wanted, affix "TMS" to number, thus—5695 TMS.

*Can also be furnished in plated finishes.

One pair in a box, with screws.

Specify number, size and finish. Description of finishes, page V.

Lockwood Door Closers

The Lockwood Door Closer embodies all of the principles of mechanical design of the famous original Blount Liquid Door Check. Refinements and improvements have been made from time to time, so that today the Lockwood Door Closer unquestionably represents the ultimate in a door closing and door controlling device.

Architects and contractors can confidently recommend it for schools, hotels, office buildings, churches, theaters and all public buildings, where the cost of upkeep and trouble-free service are determining factors in the selection.

The simplicity of construction of the Lockwood Door Closer is one of its outstanding characteristics and this feature reflects in its low maintenance cost. When it is necessary to recondition a Lockwood Closer, it can be done at a very nominal charge.

The Lockwood Liquid Door Closer can be applied to doors of either hand, by simply inverting the spring and altering the position of the arm on the shaft. The template, packed with each closer, gives specific instructions on how to speedily accomplish this change of hand. It is not affected by climatic conditions and a turn of the thumb screw will adjust it to any draught. Unusual methods of application can be accomplished by writing to the factory and giving full details of the conditions to be met.

The Lockwood Door Closer is positive, silent, economical and efficient.

Lockwood Door Closer Construction

Crank Shaft

The Crank Shaft is a predominant part of a door closer. The Lockwood Crank Shaft, with three main bearings, is formed from a single solid alloy steel drop forging, producing a permanent unit which will withstand the most severe strains and stresses.

Shaft Packing

The method of packing the shaft, used in Lockwood Door Closers, is simple and effective. It successfully resists leakage of the liquid from the lower chamber up into the spring chamber. A patented Wrought Steel Combination Packing Nut has been devised to insure against porosity and also to check the liquid which may rise, through capillary action, along the shaft. An overflow chamber and ports to the liquid chamber relieve the packing from excessive strain.

Piston and Connecting Rod

The specially designed Piston and Connecting Rod is accurately machined and fitted. The connecting link is made of solid forged steel and held in place by a welded strip of cold rolled steel of high tensile strength. This sturdy construction provides amply for the severe strain to which the piston rod is subjected.

Coil Spring

The clock-type Coil Spring is made of high carbon steel, scientifically tempered. Each spring is thoroughly tested to minimize the possibility of breaking, even when used under the most severe conditions.

Regulating Screw

The Regulating Valve, operated by a thumb screw, can be adjusted to control the door perfectly under any conditions which may obtain.

For special conditions it is advisable to install door closers which can be regulated only by designated persons. This condition obtains primarily in railroad passenger coaches, public buildings, etc. Lockwood Door Closers can be furnished, for such application, with a regulating screw operated by a removable key.

Liquid

Lockwood Door Closers have specially prepared liquid to meet all extremes of temperature and always retain proper density and viscosity. Uniform closing speed is thus insured during all seasons of the year. The liquid also acts as a lubricant for the moving parts, minimizing friction.

Lockwood Holder Arms

Holder Arm "A"

Holder Arm "B"

Lockwood Holder Arms are both designed so that they may be adjusted to hold door open at any desired degree.

Holder Arm "A"

Holder Arm "A" is a newly developed ball and socket type having many advantages over the old style friction types. The principle used is entirely new as applied to holder arms and involves the use of two hardened steel ball bearings which seat automatically, when proper hold-open position is reached, in sockets accurately placed in the hardened tool steel position disc. In this type of holder arm the ball bearings drop automatically into place when desired position is reached and it is not necessary to apply any force to the door to make holder arm function. Similarly it is not necessary to apply an extreme force to release the door from its hold-open position as a very light push will cause the ball bearings to ride out of their sockets smoothly and efficiently. The position disc can be set to hold door open at any predetermined position which may be varied to suit each individual condition. Not a friction holder.

Holder Arm "B"

Holder Arm "B" is of the friction type adjusted to desired position by nut and set screw. For use on all types of doors. A slight push or pull will release the door from its hold-open position and door will close in the usual manner.

Patent Applied for

Cut-Open View of Holder Arm "A," Showing Ball and Socket

Lockwood Holder Arms eliminate the use of floor stops, hooks or any other device used to hold doors open. They are inoperative until the door is intentionally opened to any predetermined point and held there momentarily. A slight pull on the door releases it and the closing action again functions.

When it is desired to hold the door open at intervals, to secure ventilation or to pass through the doorway while carrying a tray or any other article, the Lockwood Holder Closer is recommended.

Application of Door Closers

Right hand door. Use right hand closer
No bracket required

Left hand door. Use left hand closer
No bracket required

Soffit Bracket on right hand door
Use left hand closer

Flush Bracket on right hand door
Use left hand closer

Corner Bracket on right hand door
Use left hand closer

Parts for Lockwood Door Closers
When ordering parts, specify part number and size of closer

Lockwood Door Closers

The table below lists the sizes of Lockwood Door Closers to be used under ordinary conditions. Metal doors and doors with heavy glass panels require larger closers than ordinary wood doors. For unusually heavy doors and doors exposed to severe drafts, use one size larger than is specified in this table.

No.	No. with Holder Arm "A"	No. with Holder Arm "B"	Cast Iron
1	HA 1	HB 1	For screen door or very light inside door
2	HA 2	HB 2	" light inside door not over 7 ft. x 2 ft., 8 in.
3	HA 3	HB 3	" " " " " " 7 ft. x 3 ft. or light outside door 7 ft. x 2 ft., 8 in.
4	HA 4	HB 4	" heavy inside or outside door not over 7½ ft. x 3 ft.
5	HA 5	HB 5	" " outside door not over 7½ ft. x 4 ft.
6	HA 6	HB 6	" " " " 8½ ft. x 4 ft.

Door closers are ordinarily finished in Gold Bronze, but will be finished in Silver Bronze, Maroon Bronze or Dead Black Finish at the same price. Imitation Plated Finishes and Genuine Plated Finishes can be furnished at extra cost.

Cast Bronze

The above door closers can be furnished in Solid Cast Bronze at an additional price.

With Fusible Link

The Lockwood Door Closers listed above with holder arms can be furnished to order with a fusible link.

When door closers with holder arms are used on the doors of office buildings, schools, storage buildings, etc., it is essential that the doors be quickly closed in case of fire. To meet such a condition the holder arm is constructed with a fusible link which will melt and release the holder arm when subjected to abnormal heat, and the door is automatically closed.

In ordering, affix "FL" to number, thus, HA 1 FL. When so ordered, Lockwood Door Closers will be furnished made to template, with machine screws.

Parts for Lockwood Door Closers

For Illustrations, See Opposite Page

No.	Description	No.	Description
1	Case or Shell	15	Ball Stud
2	End Cap	16	Forked Arm
3	End Cap Washer	17	Clamp Screw for Ball Socket

14	Pawl and Pawl Pin	28	Ratchet Wrench

In ordering, specify the number of the part wanted and the number of the door closer for which it is intended. Specify number and finish. Description of finishes, page V.

Lockwood Door Closer Brackets

Soffit Bracket

Soffit Brackets should be used where the door opens out and where it is desirable to have the door closer indoors or where it is not possible to apply the closer to the hinge side of the door.

Specify number of door closer with which the bracket is to be used.

Corner Bracket

Corner Brackets should be used where the soffit is narrow and will not permit the use of a soffit bracket. This bracket can be securely fastened to both the jamb and soffit, giving it greater solidity against the strain of the closer.

Specify number of door closer with which the bracket is to be used.

Flush Bracket

Flush Brackets should be used where the surface of the jamb is not sufficiently wide to permit using the soffit or corner brackets.

Specify number of door closer with which the bracket is to be used.

Adjustable Circular Top Bracket

Circular Top Brackets are used on circular top doors, opening out, and where condition will not permit application of the door closer to the hinge side of the door.

Specify number of door closer with which the bracket is to be used.

Adjustable Foot

Adjustable Foot

The Adjustable Foot may be used for many applications where it is desired to eliminate the use of brackets. The foot is adjustable to various sizes and styles of jambs and permitting the use of a door closer under unusually adverse conditions. It will also allow the door to open a full 180 degrees.

Specify number of door closer with which the adjustable foot is to be used.

Brackets to meet special conditions can be furnished to order. When conditions of this character exist, blue prints showing design of door and jamb should be submitted to us and suitable brackets can be designed to meet the specific requirements.

Brackets furnished in finishes to match door closers.

When ordering, specify exact height of door or window and distance from bottom thereof to center of handle. If the strikes illustrated do not suit the requirements, owing to various conditions which may exist, it is necessary to send a full size sectional detail of the meeting rails, head and sill.

*Can be furnished with wrought bronze rod when so ordered.

Packed with screws.

Cremone Bolts

For Doors or Windows Opening In or Out

Nos. 5182 to 08182
Operates from
One Side Only

The bolts securely fasten the doors or windows at both top and bottom.

Operation

Nos. 5182, 5182U, 8182 and 8182½: A quarter turn of the knob releases and withdraws both the top and bottom bolts.

Nos. 05182, 05182U and 08182: A half turn of the knob releases and withdraws both the top and bottom bolts.

No. 8182½ operates from either side of the door. The stop deadlocks the knobs so they cannot be operated from either side.

Cremone bolts are furnished regularly for 8-foot doors, with two end guides and two center guides. Longer rods can be furnished to order.

Specify in Ordering

When ordering specify height of window or door, width of stile and distance from desired center of knob. State whether window or door is flush or recessed and if it opens in or out of room. If opening out, specify hand and use bolt with lever handle.

For recessed windows rim strikes cannot be used, but strikes selected from illustrations on page 225 will be furnished to order.

No. 8182½
Operates from
Both Sides

Cremone Bolts

For Doors or Windows Opening In or Out

The bolts securely fasten the doors or windows at both top and bottom.

Operation

Nos. 5183, 5183U, 8183 and 8183½: A quarter turn of the lever handle releases and withdraws both the top and bottom bolts.

Nos. 05183, 05183U and 08183: A half turn of the lever handle releases and withdraws both the top and bottom bolts.

No. 8183½ operates from either side of the door. The stop deadlocks the lever handles so they cannot be operated from either side.

Cremone bolts are furnished regularly for 8-foot doors, with two end guides and two center guides. Longer rods can be furnished to order.

Specify in Ordering

When ordering specify height of window or door, width of stile and distance from bottom to desired center of lever handle. State whether window or door is flush or recessed and if it opens in or out. If opening out, specify hand and use bolt with lever handle.

For recessed windows rim strikes cannot be used, but strikes selected from illustrations on page 225 will be furnished to order.

Strikes for Special Conditions

Unless otherwise ordered, all Cremone Bolts will be packed with the strikes shown with the bolt, which are used when window and ceiling are flush.

The above illustrations cover types of strikes used for varying conditions of head and sill. If any of these special strikes are desired, to meet unusual conditions, order by number, mentioning bolt with which the strikes are to be used. A sectional detail of the head, sill and meeting rails should accompany the order.

Specify number and finish. Description of finishes, page V.
